Muhammad Faseeh Ali

Available Immediately | Lahore, Pakistan | Open to Remote

Junior Full Stack (MERN) Developer

5 years' experience

Full Stack Developer with practical experience building scalable MERN stack applications and implementing CI/CD workflows. Strong foundation in backend architecture, REST API design, authentication systems, database modeling, and deployment practices. Focused on writing clean, maintainable, and secure code aligned with production standards.

Technical Skills Junior Full Stack (MERN) Developer

Skill	Years of Experience
JavaScript	5 Years
TypeScript	5 Years
Node.js	5 Years
Express.js	4 Years
React.js	5 Years
MongoDB	5 Years
RESTful APIs	4 Years
JWT Authentication	4 Years
Role-Based Access Control	3 Years
Git / GitHub	3 Years
CI/CD (GitHub Actions)	2 Year

Docker	2 Year
Postman (API Testing)	2 Years
Linux (Basic)	1 Year
SQL	2 Years

Professional Experience

Web Developer – Najah Private Limited

Built frontend applications using React and Angular, integrated REST APIs with backend services, implemented JWT-based authentication flows, and collaborated using Git-based workflows while improving code modularity and UI responsiveness.

Junior AI/ML Developer – Arfa Kareem Technology Incubator

Developed structured backend logic for AI-based systems, created data processing pipelines, and supported API integrations while improving system efficiency and architectural understanding.

Professional MERN & DevOps Projects

SaaS Project Management System (MERN + CI/CD + Docker)

Developed a multi-user SaaS-style project management platform implementing secure JWT-based authentication with role-based access control. Designed RESTful APIs following MVC architecture, implemented pagination and optimized MongoDB queries, and structured reusable service layers. Containerized backend and frontend using Docker and configured a CI/CD pipeline with GitHub Actions to automate build validation and deployment workflows.

E-Commerce Backend API

Designed and implemented a scalable backend API for an e-commerce system supporting product management, order processing, and admin role controls. Applied middleware validation, centralized error handling, secure authentication, and clean architecture principles to simulate production-ready backend standards.

Authentication Microservice

Built a standalone authentication service using Node.js and Express with JWT-based authentication, refresh token rotation strategy, secure password hashing, and HTTP-only

cookie implementation. Dockerized the service and integrated automated CI workflows for testing and build validation.

Inventory & Warehouse Management System

Developed an inventory management platform enabling product tracking, stock alerts, supplier management, and dashboard analytics. Implemented indexed MongoDB collections and optimized query performance while maintaining modular backend structure and secure API endpoints.

Education

Bachelor of Computer Science – Bahria University (2022 – 2025)

Certifications

- Machine Learning with Python – IBM
- Generative AI – Microsoft
- GitHub Foundations
- MongoDB Developer Certification
- Meta Front-End Developer Professional Certificate
- Node.js Application Developer Certification
